## Designs On Time & On Budget

Pittman Engineering, Inc. is a Sacramento, California based engineering/consulting business, which offers innovative designs, reliable service and high quality results on time and budget.

Established in 2001, the company continues to grow with over 23 years of combined Principals experience in developing comprehensive sets of construction documents for commercial and light industrial projects.

Our mission is simple, to provide cost effective engineering solutions, maximizing the value for our clients. Our vision is to continually strive to be the choice engineering company by serving our clients well and guiding others who want to build in smart, efficient and sustainable ways.

Our values are to meet client needs, do more with less and keep the environment safe, all while continuing to innovate.

KNOWLEDGEABLE EXPERTS

WEALTH OF EXPERIENCE

RIGHT PRODUCT, RIGHT PRICE

GREEN, LEED CERTIFIED

## OUR SERVICES

Pittman Engineering's projects range anywhere from corporate offices to medical facilities to retail stores. We are pleased to share that our clients keep coming back and refer their colleagues to our services. We have a solid reputation for providing practical solutions, rapid turnaround and cost effective design.

### MECHANICAL

- Heating, Ventilating & Air Conditioning (HVAC)
- Process Piping
- VAV & VVT Systems
- Boiler Systems
- Thermal Storage
- Waterside Economics
- Rooftop Page & Split Systems
- DDC Controls

### PLUMBING

- Water & Waste Distribution
- Collection
- Laboratory Waste
- Medical Systems
- Compressed Air
- Vacuum Systems
- High Purity Gas Systems
- Ventilation

### ELECTRICAL

- Power Distribution
- Bus Duct
- Low voltage
- Lighting
- Fire Alarm/Life Safety
- Emergency Systems
- Power Supplies
- Uninterruptable Power Supplies

### PHOTOVOLTAIC (PV)

- Solar System Proposal
- Rooftop Solar
- Ground Mount Solar
- Building Solutions
- Code Compliance

## OUR PROCESS

We start each project with a one hour client brief. During this meeting we go over the layout, components and ask the right questions to get the project off to an efficient start. Once all the data is gathered, draft one of the construction documents are sent over to the client for review. Once all the edits are communicated, they are applied and we provide draft two of the constructions documents. We have a high reputation for seamless plan checks. Additional steps may take place depending on the type of engineering requested.

## ABOUT THE PRINCIPALS

Robert Pittman, Founder and Tom Godfrey, Principal, manage each design team. They have hands-on engineering experience and take pride in being involved in each project, ensuring the highest quality. Both Principles hold professional engineering licenses. The Founder is a certified electrical plans examiner. They take pride in taking on the complexity of developing accurate and detailed construction documents so you can spend more time with clients. Our focus on practical solutions sets us apart from our competitors, as we always keep your best interest in mind.

## SUSTAINABILITY

Pittman Engineering is a member of the U.S. Green Building Council and understands the value of sustainable buildings.

With LEED Certification, we have the capability to design building that reduce energy consumption through practices that are economical and readily available.
